

SpeakSpark Labelled Design Walkthrough

Science English B2C launch - coaching-only UX risks

PRIMARY RISK

The UI can accidentally read as scoring, judging, or contest preparation.

PRODUCT DIRECTION

Position SpeakSpark as a private practice coach, not an evaluator.

LAUNCH RULE

Coach process only: prompts, frames, vocabulary choices, and one next-run plan.

AVOID

Full speeches, contest scores, ranking language, real-time error marking, and provider-specific AI errors.

Start Screen - Motivation Without Scoring

The first screen is friendly, but points and streaks can increase practice pressure.

ISSUES AND FIXES

Numbered markers correspond to the screenshot callouts.

- 1 Streak language can create pressure**
Use softer growth language such as '5 practices this week' instead of making the streak the emotional hook.
- 2 '92 pts' reads like a score**
Replace points with private learning evidence: '2 phrases saved', '1 coach note', or 'Vocabulary note'.
- 3 CTA is strong but competition-adjacent**
Keep the big action. For lower anxiety, test 'Start Practice' or 'Practice this topic' instead of 'Start Speaking'.

RECOMMENDED DIRECTION

Make the first screen about choosing a practice topic and reusing prior phrases, not earning points.

Practice Screen - Reduce Judging Signals In The Moment

During speaking, the interface should feel like a calm coach, not a live rubric.

ISSUES AND FIXES

Numbered markers correspond to the screenshot callouts.

- 'AI moments' is vague and score-like**
Rename to 'coach notes' or remove from the active speaking header.
- Metric panel feels like live judging**
Hide detailed metrics during speech. Reveal them after the run as private practice evidence.
- 'AI is listening' can feel surveillance-like**
Use 'Coach is following your practice' or 'I am following your idea' for a warmer mental model.
- Loading state blocks the practice promise**
If AI is not ready, allow recording first and generate coaching after. Do not make AI readiness the user's blocker.

RECOMMENDED DIRECTION

In the live moment, show timer, end, calm coach status, voice wave, and a save phrase action. Push scoring details after the run.

Takeaway Top - Put The Next Move Before The Trophy

The post-run page should open with the coaching plan, not a result screen.

ISSUES AND FIXES

Numbered markers correspond to the screenshot callouts.

- 1 Trophy implies winning or ranking**
Replace with a notebook/check icon and headline 'Practice complete'.
- 2 Stats row looks like a report card**
Move stats below 'What worked'. Show one human sentence first: 'You kept your idea going for 41s'.
- 3 Best product value is not first**
Make 'Next Run Plan' the hero card after every practice session.
- 4 Red AI fallback feels like failure**
Use neutral copy: 'Coach plan is ready from this run' or 'Live coach is unavailable, but your practice plan is saved'.

RECOMMENDED DIRECTION

The first post-run moment should answer one question: what should I try next?

Takeaway Lower - Guard The Coach Chatbox

The chatbox is powerful, so its boundaries must be visible before launch.

ISSUES AND FIXES

Numbered markers correspond to the screenshot callouts.

- 1

Prompt chips can feel like AI answer generation
Keep vocabulary and structure help, but change 'Go deeper' to 'Ask me one question' and avoid full-answer wording.
- 2

Progress map returns to score framing
Use text trends: 'clearer claim', 'more examples', 'longer opening'. Keep numbers secondary or hidden.
- 3

Practice again is strong
Keep this CTA. It supports the desired loop: practice, one next move, practice again.

RECOMMENDED DIRECTION

Add a persistent label: 'Coach mode: practice feedback only'. Block full speech generation in this surface.

Growth Page Top - Keep The Trying Point, Rename The Scores

The growth page has the best long-term framing, but 'Ability Portrait' still sounds evaluative.

ISSUES AND FIXES

Numbered markers correspond to the screenshot callouts.

- 1 Growth map is the right product frame**
Keep personal growth language. Avoid anything that suggests public ranking or contest readiness.
- 2 'Trying Point' is excellent**
Promote this concept across the app. It lowers anxiety by giving students one visible upgrade.
- 3 'Ability Portrait' feels like a scorecard**
Rename to 'Practice growth'. Prefer narrative evidence over fixed ability bars.

RECOMMENDED DIRECTION

Use the growth page language as the model for the whole product: one private upgrade at a time.

Growth Page Lower - Make Coach Mode A Trust Feature

Settings should make contest-safe boundaries easy for parents, teachers, and students to understand.

ISSUES AND FIXES

Numbered markers correspond to the screenshot callouts.

- 1

Practice history is useful evidence
Keep history focused on practice actions: added an example, used stronger words, spoke longer.
- 2

'User management' sounds internal
Rename to 'Settings' for a B2C student/parent-facing product.
- 3

Coach mode should be more explicit
Change 'Gentle prompts' to 'Practice feedback only' or 'Contest-safe coaching on'.

RECOMMENDED DIRECTION

Expose safety as a product strength. The boundary is not a limitation; it is why stakeholders can trust the app.
